Review of Probability Theory

Zahra Koochak and Jeremy Irvin

Elements of Probability

Sample Space Ω

$$\{HH, HT, TH, TT\}$$

Event $A \subseteq \Omega$

$$\{HH, HT\}, \Omega$$

Event Space \mathcal{F}

Probability Measure $P: \mathcal{F} \to \mathbb{R}$

$$P(A) \ge 0 \quad \forall A \in \mathcal{F}$$

$$P(\Omega) = 1$$

If $A_1, A_2, ...$ disjoint set of events $(A_i \cap A_j = \emptyset \text{ when } i \neq j)$, then

$$P\left(\bigcup_{i}A_{i}\right)=\sum_{i}P(A_{i})$$

Conditional Probability and Independence

Let B be any event such that $P(B) \neq 0$.

$$P(A|B) := \frac{P(A \cap B)}{P(B)}$$

$$A \perp B$$
 if and only if $P(A \cap B) = P(A)P(B)$

$$A \perp B$$
 if and only if $P(A|B) = \frac{P(A \cap B)}{P(B)} = \frac{P(A)P(B)}{P(B)} = P(A)$

Random Variables (RV)

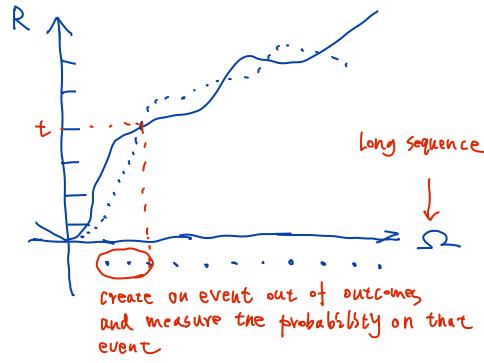

Sequence of heads and tails
$$\omega_0=HHHTHTTHTT$$

A RV is $X:\Omega\to\mathbb{R}$ function map outcome to real value $\#$ of heads: $X(\omega_0)=5$

$$\#$$
 of tosses until tails: $X(\omega_0)=4$

$$Val(X) := X(\Omega)$$

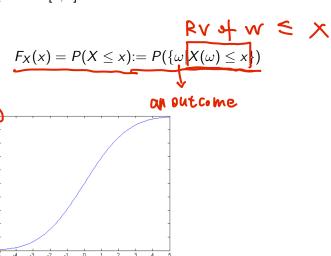

$$Val(X) = \{0, 1, ..., 10\}$$

Cumulative Distribution Function (CDF)

$$F_X: \mathbb{R} \to [0,1]$$

0.7 · 0.6 · 0.5 · 0.4 · 0.3 · 0.2 · 0.2 · 0.2 · 0.3 · 0.2 · 0.2 · 0.2 · 0.3 · 0.2 · 0.2 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.2 · 0.3 · 0.3 · 0.2 · 0.3 ·

Discrete vs. Continuous RV

Discrete RV
$$Val(X)$$
 countable

$$P(X = k) := P(\{\omega | X(\omega) = k\})$$

Probability Mass Function (PMF) $p_X : Val(X) \to [0, 1]$

$$p_X(x) := P(X = x)$$

$$\sum_{x \in Val(X)} p_X(x) = 1$$

Continuous RV Val(X) uncountable

$$P(a \le X \le b) := P(\{\omega | a \le X(\omega) \le b\})$$

Probability Density Function (PDF) $f_X : \mathbb{R} \to \mathbb{R}$

$$f_X(x) := \frac{d}{dx} F_X(x)$$

$$f_X(x) \neq P(X = x)$$

$$\int_{-\infty}^{\infty} \underbrace{f_X(x) dx}_{P(x < X < x + dx)} = 1$$

Expected Value and Variance

$$g:\mathbb{R}\to\mathbb{R}$$

Expected Value

Let X be a discrete RV with PMF p_X .

$$\mathbb{E}[g(X)] := \sum_{x \in Val(X)} g(x) p_X(x)$$

Let X be a continuous RV with PDF f_X .

$$\mathbb{E}[g(X)] := \int_{-\infty}^{\infty} g(x) f_X(x) dx$$

Variance

$$Var(X) := \mathbb{E}[(X - \mathbb{E}[X])^2] = \mathbb{E}[X^2] - \mathbb{E}[X]^2$$

Example Distributions

| Distribution | PDF or PMF | Mean | Variance |
|----------------------------|---|---------------------|-----------------------|
| Bernoulli(p) | $\begin{cases} p, & \text{if } x = 1 \\ 1 - p, & \text{if } x = 0. \end{cases}$ | р | p(1-p) |
| Binomial(n, p) | $\binom{n}{k} p^k (1-p)^{n-k}$ for $k = 0, 1,, n$ | np | np(1-p) |
| Geometric(p) | $p(1-p)^{k-1}$ for $k = 1, 2,$ | $\frac{1}{p}$ | $\frac{1-p}{p^2}$ |
| $Poisson(\lambda)$ | $\frac{e^{-\lambda}\lambda^k}{k!}$ for $k=0,1,$ | λ | λ |
| Uniform(a, b) | $\frac{1}{b-a}$ for all $x \in (a,b)$ | $\frac{a+b}{2}$ | $\frac{(b-a)^2}{12}$ |
| Gaussian (μ, σ^2) | $\frac{1}{\sigma\sqrt{2\pi}}e^{-\frac{(x-\mu)^2}{2\sigma^2}} \text{ for all } x \in (-\infty,\infty)$ | μ | σ^2 |
| Exponential(λ) | $\lambda e^{-\lambda x}$ for all $x \ge 0, \lambda \ge 0$ | $\frac{1}{\lambda}$ | $\frac{1}{\lambda^2}$ |

Two Random Variables

Bivariate CDF

$$F_{XY}(x,y) = P(X \le x, Y \le y)$$

Bivariate PMF

$$p_{XY}(x,y) = P(X = x, Y = y)$$

Marginal PMF

$$p_X(x) = \sum_y p_{XY}(x, y)$$

Bivariate PDF

$$f_{XY}(x,y) = \frac{\partial^2 F_{XY}(x,y)}{\partial x \partial y}$$

Marginal PDF

$$f_X(x) = \int_{-\infty}^{\infty} f_{XY}(x, y) dy$$

Bayes' Theorem

- ▶ Given the conditional probability of an event P(x|y)
- ▶ Want to find the "reverse" conditional probability, P(y|x)

$$P(y|x) = \frac{P(x|y)P(y)}{P(x)}$$

where:
$$P(x) = \sum_{y' \in value\ y} P(x|y')P(y')$$

X and Y are continuous

$$f(y|x) = \frac{f(x|y)f(y)}{f(x)}$$

where:
$$f(x) = \int_{y' \in value\ y} f(x|y')f(y')dy'$$

Example for Bayes Rule

▶ You randomly choose a treasure chest to open, and then randomly choose a coin from that treasure chest. If the coin you choose is gold, then what is the probability that you choose chest A?

$$a)\frac{1}{3}$$
 $b)\frac{2}{3}$ $c)1$ $d)$ None

Independence

Two random variables X and Y are independent if:

$$p_{XY}(x,y) = p_X(x)p_Y(y)$$

$$P_{Y|X}(x,y) = P_Y(y)$$

For continuous random variables:

$$p_{XY}(x,y) \rightarrow f_{XY}(x,y)$$

Example for independent random variables

▶ Spin a spinner numbered 1 to 7, and toss a coin. What is the probability of getting an odd. number on the spinner and a tail on the coin?

$$p_{XY}(x,y) = p_X(x)p_Y(y) = \frac{1}{2} \times \frac{4}{7} = \frac{2}{7}$$

Expectation

- X, Y:Two continuous random variables
- ightharpoonup g , R2 ightharpoonup R : A function of X and Y

$$E(g(x,y)) = \int_{x \in Val(x)} \int_{y \in Val(y)} g(x,y) f_{XY}(x,y) dxdy$$

Example

$$g(x,y) = 3x$$
, $f_{x,y} = 4xy$, $0 < x < 1$, $0 < y < 1$
 $E(g(x,y)) = \int_0^1 \int_0^1 3x \times 4xy \ dxdy$

Covariance of two random variables X and Y

$$Cov[x, y] = E[(x - E[x])(y - (E[y]))]$$

= $E(XY) - E(X)E(Y)$

If X and Y are independent, then:

$$E(XY) = E(X)E(Y) \rightarrow Cov[x, y] = 0$$

$$Var[X + Y] = [E(X + Y)]^2 - E((X + Y)^2)$$

$$Var[X + Y] = Var[X] + Var[Y] + 2Cov[X, Y]$$

Multivariant Gaussian (Normal) distribution

 $x \in \mathbb{R}^n$. Model $p(x_1), p(x_2),etc$. at the same time. Parameters $: \mu \in \mathbb{R}^n, \Sigma \in \mathbb{R}^{n \times n}$ (covariance matrix)

$$p(x; \mu, \Sigma) = \frac{1}{(2\pi)^{n/2} |\Sigma|^{\frac{1}{2}}} exp(-\frac{1}{2}(x - \mu)^T \Sigma^{-1}(x - \mu))$$

$$\Sigma = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$\mu = \begin{bmatrix} 0 & 0 \end{bmatrix}^{\mathsf{T}}$$

Conditional Probability and Expectation

Remember:

Let B be any event such that $P(B) \neq 0$.

$$P(A|B) := \frac{P(A \cap B)}{P(B)}$$

Conditional Probability and Expectation

X,Y are RVs with the same probability space,

we have

$$P(X = x | Y = y) = \frac{P(X = x, Y = y)}{P(Y = y)}$$

$$\mathbb{E}(X|Y=y) = \sum_{x} x \frac{P(X=x, Y=y)}{P(Y=y)}$$

Conditional Probability and Expectation

$$\mathbb{E}[X|Y]$$

It is actually a random variable

$$\mathbb{E}[X|Y](y) = \mathbb{E}[X|Y = y]$$
 is a function of Y

Law of Total Expectation

Let X, Y be RVs with the same probability space, then

$$\mathbb{E}[X] = \mathbb{E}[\mathbb{E}[X|Y]]$$

A brief proof of X,Y being discrete and finite

$$\mathbb{E}[\mathbb{E}[X|Y]] = \mathbb{E}[\sum_{x} xP(X = x|Y)]$$

$$= \sum_{y} (\sum_{x} xP(X = x|Y = y))P(Y = y)$$

$$= \sum_{y} \sum_{x} xP(X = x, Y = y)$$

$$= \sum_{x} x(\sum_{y} P(X = x, Y = y))$$

$$= \sum_{x} xP(X = x)$$

$$= \mathbb{E}[X]$$

More Conditioned Bayes Rule

$$P(a|b,c) = \frac{P(b|a,c)P(a|c)}{P(b|c)}$$

It is actually the same as the Bayes Rule:

$$P(a|b) = \frac{P(b|a)P(a)}{P(b)}$$

with a random variable c that all the probabilities are conditioned on.

More Conditioned Bayes Rule

A proof:

$$\frac{P(b|a,c)P(a|c)}{P(b|c)} = \frac{P(b,a,c)P(a|c)}{P(b|c)P(a,c)}$$

$$= \frac{P(b,a,c)P(a,c)}{P(b|c)P(a,c)P(c)}$$

$$= \frac{P(b,a,c)}{P(b|c)P(c)}$$

$$= \frac{P(b,a,c)}{P(b|c)P(c)}$$

$$= \frac{P(b,a,c)}{P(b,c)}$$

$$= P(a|b,c)$$
